CA 2135566	A			H01B-003/04	
CZ 9403234	A3			H01B-003/42	
EP 660336	A3			H01B-003/04	

Abstract (Basic): EP 660336 A

Electrical insulation material has a matrix of heat-resistant thermoplastic resin(s) (I) contg. insulating mineral flakes, pref. mica microflakes (II). The novel features are that (a) (II) have a particles size < 20 microns; and (b) the material is made from a dispersion of (I) particles and (II), which is coated on a support, then the coated support is dried at a temp. at which (I) flows.

Also claimed are a conductor with a sheath of this material and its. prodn..

Pref. (I) comprises polyimide, polycarbonate, PET, polyethylene naphthalate, PPS, PPO, polyether-imide, PPEK, polypropylene, polyphenyl sulphone, polyaryl sulphone or polyether sulphone, esp. polysulphone. (II) is muscovite and/or phlogopite. The insulation material may also contain (semi)conducting particles, esp. conductive particles of mica-metal oxide or metal oxide pigment. The support is reinforced polyester fleece or woven glass fibre fabric. The insulation material pref. is a film obtd. by (1) extrusion of a green film of (I) and (II) and (2) rolling onto a support, providing mechanical reinforcement, on a calender. (I) contains 20-40 wt.% (II).

USE - The material is esp. useful for insulating conductors used in electrical machines, e.g. motors or generators, including slot insulation, and also for chokes.

ADVANTAGE - The material is free from partial discharges, even at high voltage and relatively high operating temps..

Abstract (Basic): EP 59402 A

The coil consists of a bundle (23) of conductors 9 (22) enclosed in insulation (13). The coil is made by placing this assembly inside shaping pieces (25,26). The shaping pieces are enclosed in a shrink-fit material (27) and heated to shrink the material. The assembly is then impregnated with resin.

The shrink-fit material is porous to impregnating resin. The assembly is placed in a jig (28-31) that gives it its final shape and is heated to shrink the material. The gaps (32,33) between the shaping pieces are preserved throughout the process. When removed from the jig the coil retains its shape.
